

International Workshop on Optical Quantum Information

(A satellite meeting of AQIS-13)

1-2 September 2013

Department of Physics and Materials Science and Engineering
Jaypee Institute of Information Technology, Noida - 201307, India

Quantum computation and quantum communication are among the most emerging areas of interdisciplinary research. Proposals of quantum computation and communication have been implemented using different technologies. Optical implementations have played a crucial role in the recent developments, specially in quantum cryptography and teleportation. This advanced workshop will be focused on optical quantum information with special attention to recent experiments. Leading experts of the field will discuss theoretical and implementation aspects of various proposals of quantum information processing. The workshop will facilitate the exchange of ideas and discussions on latest results among the leading experts of the field and the young researchers. This workshop is a satellite meeting of Asia Quantum Information Science (AQIS-13) organized by IMSc, Chennai.
